

# INTEGRATED OPTICAL DEVICES: SILICON PHOTONICS IS TRANSFORMING OUR INDUSTRY

7<sup>TH</sup> EDITION | MAY 2021

Source: Broadcom

## Table of Contents

Table of Contents.....	2
Abstract.....	4
Executive Summary.....	5
Market forecast for co-packaged optics.....	8
Chapter 1: Expectations, Progress and the Future of Integrated Optical Devices.....	10
Optical transceivers.....	10
Optical cables and interconnects.....	13
Defining integration.....	15
Market size for discrete and integrated optical transceivers.....	16
Monolithic integration of optics with electronics.....	18
Monolithic integration in other materials.....	20
Hybrid integration and co-packaging.....	20
Co-packaged optics and ASICs.....	22
The long-term promise of silicon photonics.....	26
All-optical processors.....	29
Chapter 2: Indium Phosphide-Based Technology, Products, and Markets.....	31
Main applications and market segments.....	31
Technology and manufacturing.....	33
Integrated DWDM products.....	36
Integrated Ethernet products.....	40
Integrated FTTx products.....	42
Market forecast for discrete and integrated InP products.....	43
Chapter 3: Gallium Arsenide-Based Technology, Products and Markets.....	48
Main applications and market segments.....	48
Technology and manufacturing.....	50
Integrated VCSEL products.....	51
Market Forecast for discrete and integrated GaAs products.....	53
Chapter 4: Silicon Photonics Technology, Products and Markets.....	58
SiP technology.....	59
SiP products for Ethernet and AOC/EOM applications.....	62

SiP-based DWDM products .....	65
The bottom line.....	67
Chapter 5: Silicon Photonics Innovation and the Industry Supply Chain .....	70
Is silicon photonics a disruptive technology?.....	70
Counterbalancing of the ‘marketing machine’ .....	71
Indium phosphide versus silicon photonics. ....	72
Silicon photonics: the foundry model emerges.....	73
Continuing investment in integration technologies .....	76
